INDUSTRIAL TEXTILES

Seamless. With precision.

vombaur
pioneering tech tex

SEAMLESS. WITH PRECISION.

Tapes, belts, seamless woven tubulars

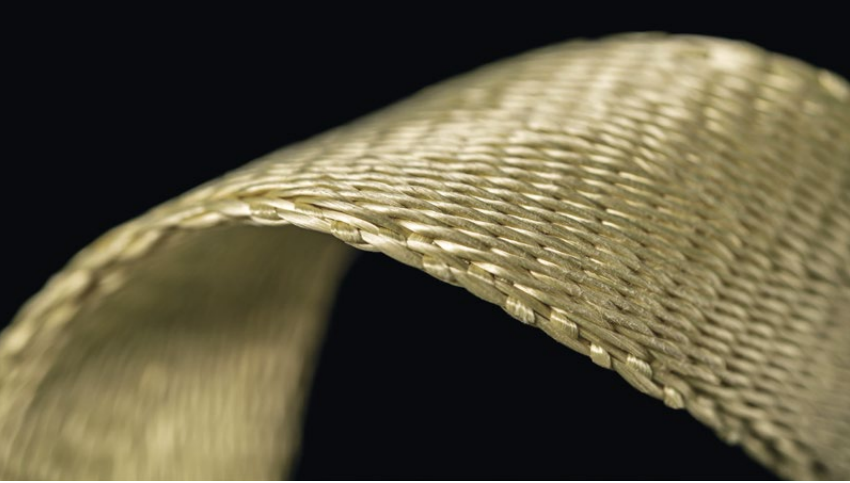

Our narrow textiles made of high-performance fibres are round- or form-woven fabrics. And without a seam or weld contours, there are no undesirable breakage points. This ensures the extraordinary resilience and special quality of our industrial textiles – tapes, belts and seamless woven tubulars with uniform properties and the highest precision.

Industrial textiles by vombaur

- > High load-bearing capacity
- > High burst strength
- > Uniform shrinkage behaviour
- > Uniform material thickness – also on curvatures and edges
- > Uniform flow rate
- > No undesirable breakage points due to seam or weld contours in longitudinal direction
- > Long service life and low wear

**Reliable and precise all around:
conveyor belt with woven-in
conductive threads**

No assembly seam and thus no undesirable breakage points

Tear-resistant and low-stretch:
Aramid belt with uniform selvedges

PROCESS ASSURED

High-tech textiles for demanding tasks

Our seamless woven high-tech narrow textiles fulfil demanding tasks. In many industries they keep the production processes running smoothly. Also and particularly in critical functions.

For our narrow textiles we use different techniques and unique equipment.

Textile solutions for a wide range of applications:

- > as continuous conveyor belts for machinery construction
- > as textile coating for timing belts
- > as filling tubulars for dewatering the soil
- > as conveyor belts in escalators
- > as cut-protection tubulars for load belt
- > as protective jackets in seat heaters
- > as an assembly aid for manufacturing continuous conveyor belts
- > and many more

ABUNDANT

High performance materials for high performance products

High performance materials form the basis for our industrial textiles. The mechanical, chemical and thermal requirements of the component determine the choice of raw materials. For our tapes, belts and woven tubulars, we choose the basic material or material combination that best meets the respective requirements. We enhance our products in certain applications – for example, with conductive coatings.

Do you need a narrow textile made of a different material? Please feel free to contact us.

Industrial textiles made of high-performance fibres

- > Stainless steel
- > Copper
- > Polyester
- > Polyamide
- > Polypropylene
- > PTFE
- > PVDF
- > PEEK
- > PPS
- > ETFE
- > Carbon
- > Aramid
- > Glass
- > and others

Your individual requirements drive the choice of raw materials.

Precisely defined:
Hem-stitched belt made of high tensile polyester

IN APPLICATIONS

Your application – our development: customised technical textiles

They convey, they reinforce, they pull, they protect people and materials against cuts and UV radiation: In numerous industrial applications our narrow textiles made of synthetic and metallic fibres fulfil decisive tasks.

□ We manufacture custom widths up to 950 mm.

□ Also in special designs with two identical selvages, with elasticated weft

**Heat resistant and flexible:
Engine intake tubular made
of PPS and Aramid**

LOADABLE.
PROCESS ASSURED.
DURABLE.

Reliable protection:
Load strap covering made of highly
cut-proof thread for challenging tasks

SAFETY GUARANTEED

Tapes, belts and seamless woven tubulars for demanding tasks

Technical textiles need to perform precisely and reliably. And for as long as possible. Seams often turn out to be weak points. Our woven tubular narrow textiles made of high-tech threads do not have any seams.

This leads to the extremely high loadability, tensile strength and cut resistance of our tapes, belts and round woven tubulars. Thanks to our high-tech narrow textiles, production processes in industry run safely and smoothly, because we know how they need to perform. Reliably and durably.

Load belt

Maximum tensile strength and safety for parachute belts and more

Thanks to the two identical selvages and the simultaneous stop of all longitudinal threads

Hem-stitched belt

Precisely defined properties, precise finishing: We manufacture technical textiles with minimal tolerance limits for you.

Thanks to precise positioning of channels without warp threads

Continuous conveyor belt

Low-wear and air-permeable conveyor belt

Thanks to the uniform surface properties of the seamless woven tubular

Conductive narrow textiles

Woven for antistatic discharge, as lightning strike protection or for further applications with a low electrical resistance

□ Thanks to a special stainless steel alloy

Coating belt

Round woven tubular with uniform running properties, ideal for homogeneous coating applications

□ No difference in thicknesses thanks to the seamless woven surfaces

Heat-shrink tubular

Seamless round woven tubular, characterised by homogeneous shrinkage behaviour

□ Through all round weft thread

ALL AROUND

Uniform properties, uniform behaviour

Seamless round woven narrow textiles are characterised among other things by the fact that they have identical properties over the entire surface. They therefore have exactly the properties you need – all around and over the entire length.

- **Seamless narrow textiles:**
No unevenness, no differences in thickness, no differences in shrinkage or coating

Precise and durable:
Wear-resistant textile reinforcement for timing belts

PRECISE.
PERFECT FIT.
UNIFORM.

CUSTOMISED

We are your development partner.

Your requirement drives our product development: depending on what your component has to achieve, we select and combine the materials, the woven fabric type, the weaving technique and the finishing.

Industrial textiles to your specifications

MATERIAL	All weavable synthetic and metal threads
FINENESS	All
THREAD TYPE	Monofilament, multifilament, spun
FLAT WIDTH	Standard: up to 350 mm Custom-made products: up to 950 mm
WEAVING TECHNIQUE	Needle or shuttle technology
3D PROFILE AND CHAMBER SYSTEMS	T, double T, star shape, hollow chamber structures, omega profiles and others
WEAVE	Taffeta, twill, satin, special bindings
FINISHING	Powder-coated, non-woven coated, hot melt adhesive component, washed, thermoset (contact heat, hot air or saturated steam), coated, shrunk, printed
FABRICATION	Ultrasonic welding, sewing, shrink wrapping, covering plastic or metal carrier, connections with injection moulding, delivery as kit, special packaging
SPECIAL FEATURES	With two identical selvages, with elasticated weft, with leno weave in tubular fabrics

Conductive:
Copper glass tape for industrial applications

A close-up, macro photograph of a woven copper mesh. The mesh is composed of numerous thin, parallel copper strands that are interlaced to form a fine, grid-like pattern. The strands have a warm, reddish-brown hue. The mesh is curved, creating a sense of depth and movement. The bottom edge of the mesh is wavy and slightly frayed, revealing the individual strands. The background is a solid, dark black, which makes the copper mesh stand out prominently.
